## Tilsynsførendes bemærkninger

side 1 af 1

Fødevarestyrelsen har foretaget kontrol efter anmeldelse ved telefonisk/skriftlig henvendelse til virksomheden den 6.9 2024. Oplyste virksomheden om fund af orm i Wasa Knækbrød frukost købt i Spar i Gudhjem/Bornholm. Virksomheden havde følgende bemærkninger fra deres leverandør WASA fremsendt den 26.9 2024.

Given the importance of this matter for our products, our teams have developed through the years a knowledge that is second to no one. This results into the implementation in our plants of a pest control program developed by our experts, based on the latest techniques of Integrated Pest Management, to prevent the occurrence of such events.

Based on the monitoring explained above, we have not detected any infestation signs in our Barilla warehouse. Tracking the product complained, it was produced in February 2024 and has left our premises in April 23rd 2024, still cold season, meaning the product is already in the supply chain - out of our control- for over 5 months. We've assessed the pictures sent together with our internal Pest Management experts and it seems to be a *Plodia interpunctella* (moth) worm. The behavior of this pest is that only the worm can invade packaging since it is the only one with 'bite and making holes on pack ability', which is lost later in the moth phase. Since there is no other worm/signs of cocoon nor death moth inside of pack, this means this was a very recent invasion of the packaging by this worm coming from an external source.

Fødevarestyrelsen afslutter sagen.
